

AI REVENUE WORKFLOWS FOR MODERN GTM TEAMS

Stop losing pipeline to manual work.

SalesAgency designs and installs AI revenue workflows that qualify inbound leads, prepare personalized outbound, and turn sales conversations into clean CRM data, inside the tools your team already uses.

See the three engines

Built by a former GTM AI & Automation Manager with a background in tech sales and production AI systems.

• ONE CONNECTED REVENUE SYSTEM

Inbound leads

**Inbound Conversion**

Qualify, enrich, route

Target accounts

**Outbound Pipeline**

Research, personalize, sequence

Sales calls

**Deal Intelligence**

Extract, draft, update

• **Your CRM.** Approved updates only, with human review where it matters.

THE PROBLEM

Your tools are not the problem. The gaps between them are.

Leads wait for routing. Reps research accounts from scratch. Call notes never become complete CRM records. Follow-ups depend on memory. The result is not just lost time. It is lost momentum.

SalesGency connects those gaps with workflows that do the repetitive work, preserve context, and keep your team in control.

Routing waits

Qualified demand sits in an inbox until someone has time to look.

Research restarts

Every rep rebuilds the same account picture from scratch.

Data goes missing

What buyers said on the call never reaches the record.

SERVICES

Three engines. One connected revenue system.

Each engine can stand alone. Together, they remove friction across the buyer

Each engine can stand alone. Together, they remove friction across the buyer journey.

ENGINE 01

Inbound Conversion Engine

Turn every inquiry into a fast, informed next step.

Captures context, scores fit, enriches the record, and routes the lead to the right owner. High-intent buyers move quickly, while lower-fit inquiries enter the right follow-up path instead of disappearing.

- **Qualify and enrich** new leads
- **Route by fit**, territory, product, or urgency
- **Trigger the right response** and next action

[Fix inbound conversion →](#)

ENGINE 02

Outbound Pipeline Engine

Give every target account a reason to respond.

Combines account research, buying signals, and your value proposition to prepare relevant outreach at scale. Your team keeps control of targeting and approval; the workflow handles the repetitive preparation.

- **Research accounts** and buying context
- **Generate relevant**, account-specific messaging
- **Coordinate sequences** and hand qualified replies to a person

[Build outbound pipeline →](#)

ENGINE 03

Deal Intelligence Engine

Make every sales conversation useful after the call ends.

Turns call transcripts and notes into structured qualification, risks, commitments, follow-ups, and CRM updates. Reps spend less time on administration, and managers get a cleaner view of every opportunity.

- **Extract qualification**, objections, and buying signals
- **Draft follow-ups** and recommended next steps
- **Write approved information** back to the CRM

HOW IT WORKS

Built around your process, not around a generic demo.

We start with the revenue motion you already have, then install the highest-leverage workflow first.

Step 1

Diagnose

Map the funnel, handoffs, systems, data, and approval points. Identify the work that is slow, inconsistent, or invisible.

Step 2

Build

Design the workflow, connect the systems, define guardrails, and test the logic with real operating scenarios.

Step 3

Launch

Deploy with human review, document ownership, measure performance, and improve the workflow from real usage.

Keep the tools that already work. We build across your CRM, data providers, call tools, and outreach platform so the workflow lives where the work already happens.

Sales and RevOps leaders who need more coverage and cleaner data without adding administration.

Control stays with your team. Your team owns the workflow, the business logic, and the data paths. We document what was built and where approval belongs.

Marketing leaders and founders who want faster conversion of qualified demand, or a working GTM system before a full ops team.

PRICING

Start with the smallest useful engagement.

A low-risk first step, and a natural path to implementation.

DIAGNOSTIC

GTM Teardown

\$299

Find the leaks before you automate the funnel.

A focused review of one revenue motion, such as inbound conversion, outbound prospecting, or post-call operations.

- **One 45-minute** working session
- **Current-state** workflow map
- **Top three** automation opportunities
- **Recommended first build** and next steps

IMPLEMENTATION

Revenue Engine Sprint

\$2,500

Launch one production-ready workflow around a defined bottleneck.

We design, build, test, and document one focused revenue workflow inside your

we design, build, test, and document one focused revenue workflow inside your existing stack. Scope is agreed before work begins.

- **Workflow design** and implementation
- **System connections** within the agreed scope
- **Human-review** and exception rules
- **Launch documentation** and handoff

Scope an engine sprint •

CUSTOM SCOPE • TRANSFORMATION

AI-Native GTM System Custom

Connect multiple workflows into a governed revenue operating system.

For teams ready to redesign how inbound, outbound, sales conversations, and CRM operations work together. We begin with a diagnostic, establish the operating model, then implement in phases with clear ownership and measurement.

Talk through the system

Priority build • the sprint in 72 hours •
\$5,000

30-day monitoring and tune-ups •
cancel anytime • **\$1,250/mo**

Sprint terms: 50% at signed SOW, 50% on delivery. Two revision rounds included. Timeline starts the business day after signed SOW and kickoff payment.

ABOUT

Revenue systems should help people sell, not give them more work.

SalesGency is led by Patrick Diamitani, a former GTM AI & Automation Manager at Atlas HXM, owner and developer of Gency AI, and a tech-sales operator who has worked inside the processes SalesGency now improves.

That background shapes how we build. A workflow is not useful because the technology is impressive. It is useful when a seller trusts it, marketing can see what happens to demand, Revenue Operations can govern the data, and leadership can measure the result.
