

Prospect Automation Engineer

A custom engine that finds ICP accounts, researches decision-makers, writes personalized outreach, and enrolls sequences — plus the agent skills that keep it running in production.

01

Build with us

Project + retainer

02

Build with agent

Self-serve portal

03

Download template

Workflow + skill pack

What this deck covers

01 The problem

Why outbound engines stall after the first build

02 The product

Engine + skills + managed agent, not just a workflow

03 How we operate

Agency, software, and template — one architecture

04 The production engine

9-node PAE pattern and safety gates

05 Packages & process

What each motion delivers, start to finish

06 How to start

Intake, portal, or download

Outbound still dies in the handoff

Teams can buy a sequencer or a data tool. They cannot buy a production engine that maps their CRM, enrichment stack, and approval rules — then

Bespoke builds do not scale

Every client needs the same 9-node pattern remapped to their tools. Hand-wiring n8n per account is slow and inconsistent.

Software without an operator

Workflows fail silently. Nobody owns failed runs, copy drift, or credential breakage after week one.

Generic sequences, thin research

Spray-and-pray copy ignores hiring, stack, and funding signals. Reply rates stay flat.

Credentials and lock-in

Keys get pasted into the wrong place. The vendor owns the workflow. The client cannot take the engine with them.

A prospect engine you can run, not just buy

Prospect Automation Engineer is the service and product layer around the Prospect Automation Engine (PAE). We design the workflow, compile the skills, and optionally run a managed outreach agent on top.

01

Automation workflow

n8n production graph: generate, enrich, research, draft, and enroll — specialized to the client's stack.

02

Skill / project / routine

Claude or Codex skills that trigger, update, monitor, and report on the live workflow.

03

Managed or custom agent

Optional outreach harness that operates the engine, reviews failures, and ships daily status.

Three ways in. One architecture.

Agency projects, a self-serve agent portal, and a downloadable template all compile to the same PAE pattern. Choose the motion that matches how much help the client wants.

- | | | | |
|----|--------------------------|----------|---|
| 01 | Build with us | AGENCY | Project and retainer packages. We intake, design, build, revise, and optionally maintain. |
| 02 | Build with agent | SOFTWARE | Use the Prospect PAL portal. Intake form → n8n Engineer skill → export to chat, dashboard, email, or n8n. |
| 03 | Download template | TEMPLATE | Take the workflow JSON, build prompt, and n8n Engineer skill and compile locally. |

Build with us

Work with us to generate a custom workflow, skill, and/or agent. Project for the first engine. Retainer for production care.

1 Intake call

ICP, stack, approval rules, volume

2 Build package

Scope, bindings, instruction pack

3 Development

n8n graph + skills compiled

4 Revisions

Copy, filters, gate behavior

5 Deliver

Workflow, skills, report, agent

6 Maintain

Optional retainer + daily ops

Build with the agent

Use the Prospect PAL portal to customize the reference workflow. The compiler never invents nodes and never stores secrets.

STEP 01

User intake form

Conversational gate: trigger, CRM, outreach, data tool, LLM, harness, approval.

STEP 02

n8n Engineer skill

Compiles a client-specific workflow JSON against the 9-node PAE pattern.

STEP 03

Export

Chat, dashboard, email, or one-click deploy to the client's own n8n instance.

Download and compile locally

For operators who already have Claude Code, Codex, or an n8n instance and want the reference package without a services engagement.

01

Workflow JSON

Importable Prospect Automation Engine template. 9-node production graph ready to bind credentials.

02

Build prompt

Instruction pack that tells an engineer agent how to specialize nodes to the client's tools.

03

n8n Engineer skill

SKILL.md + rules so the agent updates the live workflow without inventing nodes or embedding secrets.

The full package

Every paid package ships a workflow, a skill, a QA tracker, and a daily report. The agent layer is optional — custom or managed.

n8n Prospect Engineer workflow

Generate, enrich, research, draft, enroll.

n8n Prospect Engineer skill

Trigger and update the production graph.

n8n Execution Analyst skill

Monitor runs and address errors.

Daily execution report workflow

Status, failures, and suggested fixes.

Custom outreach agent

Client-owned soul, skills, and harness.

Managed outreach agent

We operate the harness on retainer.

The skill stack around the engine

Trigger skill

CLAUDE / CODEX

Kick the n8n automation from chat with a structured payload. No ad-hoc webhook guessing.

n8n Engineer

PRODUCTION EDITS

Update the live workflow from a skill — node-safe, credential-safe, pattern-locked.

Execution Analyst

RUNTIME QA

Read failed executions, isolate the node, and propose a concrete fix.

Daily Report

OPS CADENCE

Send a daily digest of runs, errors, and applied fixes to email or Slack.

Asana Fix Tracker

OPTIONAL

Failed runs become Asana tasks with suggested remediations and an owner.

Outreach Agent

OPTIONAL HARNESS

Custom or managed agent that operates research, copy, and enrollment under approval gates.

The 9-node PAE pipeline

Every compile specializes this graph. Bindings change. The path does not.

01

Intake & Cron

02

Normalizer

03

CRM Dedupe

04

Data Adapter

05

Research + PAS

06

Approval

07

CRM Upsert

08

Enroll

09

Review Alert

From raw lead to enrolled sequence

01

Lead intake

Spreadsheet upload or NLP ICP search by headcount, funding, hiring, industry.

02

Companies & contacts

Clay, Apollo, ZoomInfo, or Amplemarket. Verified email + LinkedIn.

03

Deep research

Stack, news, hiring, funding, reviews, executive quotes.

04

Pain hypothesis

One specific bottleneck the account is living with right now.

05

PAS copy

3-sentence email + LinkedIn + phone hook, written as the assigned rep.

06

CRM + sequencer

Dedupe shield, upsert, enroll. Never touch active customers.

Four layers. Client-owned runtime.

Ingestion

CSV drops, web intent, NLP search, webhook or daily cron.

Enrichment

Adapter to the client's data tool. Role filters. Email verification.

AI reasoning

Claude (or chosen LLM) synthesizes pain and writes PAS copy.

CRM + sequencer

HubSpot / Salesforce shield. Outreach, Smartlead, Amplemarket, HubSpot Sales.

Human gates. You own the graph.

Approval switch

Every generated workflow includes node 06. Full-auto or Slack 1-click review. Never silently send during setup.

No secrets in the app

The compiler never stores API keys. OAuth and n8n keys stay in the client's browser session or their instance.

You own the architecture

Workflows live on the client's n8n. No vendor lock-in. Download JSON anytime.

Pattern lock

The engineer skill cannot invent nodes. Quality evaluator checks approval gate, ENV-only secrets, and bindings.

What you get in each motion

	BUILD WITH US	BUILD WITH AGENT	DOWNLOAD TEMPLATE
Workflow JSON	Custom, deployed	Compiled to your stack	Reference template
Engineer skill	Installed + tuned	Runs in the portal	SKILL.md included
Analyst + daily report	Yes	Available on export	Add-on / DIY
Outreach agent	Custom or managed	Optional harness	Not included
QA / Asana tracker	Yes, on retainer	Optional	Not included
Who operates it	Us, with you	You + the agent	You
Best for	High-stakes GTM	Operators who want speed	Builders who want the pack

Production outcomes, not a pilot slide

30 days

Deployment to production

3.4×

Higher reply-rate lift

20+ hrs

Saved per sales rep / week

100%

Native CRM integration

- Live in weeks, not a six-month consulting roadmap.
- Emails send from the rep's mailbox. Reps take warm replies.
- Built on the client's CRM and data tools — they keep the graph.

Who this is for

B2B teams with a real ICP

Headcount, industry, and persona filters already exist. The engine needs to run them daily.

Revenue orgs tired of tool sprawl

Clay + HubSpot + Smartlead already paid for. Missing piece is the production graph and the operator.

Agencies and operators

Need a repeatable compile path instead of rebuilding n8n from scratch for every client.

OUT OF SCOPE

When to pass

Not a fit if you want a black-box sequencer with no n8n ownership.

Not a fit if there is no CRM and no one will approve copy.

Not a fit if the goal is spray 10k cold emails with no research.

Pick a motion. Ship an engine.

Book an intake call, open the portal, or take the template. Every path ends in a workflow, a skill, a QA loop, and a daily report — with an agent if you want one.

Build with us

Intake call → build package → live engine.

Build with agent

Complete the form. Compile. Deploy to your n8n.

Download template

JSON + build prompt + engineer skill.
