CORE CAPABILITIES

The 6-Step Prospect Automation Flow

How SalesGency transforms raw lead data into booked revenue meetings.

STEP 1

Lead Intake & NLP Search

Trigger the workflow automatically in one of two ways:

- **Spreadsheet Upload:** Drop in target company lists, conference registries, or CRM exports.
- **NLP ICP Search:** Connect to data tools using natural language prompts to automatically filter by headcount, funding, hiring, or industry.

STEP 2

Get Companies & Contacts

The company list connects to your data tool of choice (**Clay, Apollo, ZoomInfo, Amplemarket**, etc.) with pre-set ICP filters to pull verified decision-makers:

- C-Suite, VPs, Directors & Department Heads
- 100% verified work email addresses (NeverBounce validation)
- Active LinkedIn profile URLs

STEP 3

Deep Web & Account Research

The engine conducts automated live research on the target company and individual prospect:

- Current tech stack & tooling bottlenecks
- Recent company news, hiring trends & funding milestones
- Product releases, customer reviews & executive quotes

STEP 4

Pain Point Hypothesis

AI synthesizes the research into a clear, actionable pain point hypothesis:

- Example: *"Acme Corp just hired 5 SDRs but is using manual spreadsheet lists, causing 15+ lost hours per rep weekly on research with less than 1% reply rates."*

STEP 5

Custom AI Copywriting (For SDRs)

Claude 3.5 Sonnet drafts a personalized, 3-sentence email using the proven **Problem-Agitate-Solve (PAS)** framework:

- Written directly **on behalf of the assigned sales rep**
- Zero generic spam • references their exact company context
- Generates multi-channel touches (Email + LinkedIn DM + Phone Hook)

STEP 6

CRM Sync & Sequencer Dispatch

The verified contact, account intel, and custom messaging are automatically synced:

- **CRM Deduplication Shield:** Checks HubSpot/Salesforce so active clients are never contacted.
- **Outreach Portal:** Automatically enrolls the lead into the rep's outbound cadence (HubSpot Sales, Outreach, Smartlead, Amplemarket).

SYSTEM ARCHITECTURE

SalesAgency PAE Architecture

A visual overview of the end-to-end autonomous outbound infrastructure.

SALESGENCY PROSPECT AUTOMATION ENGINE (PAE) - AUTOMATED PIPELINE VISUAL

Ultra-Modern Dark-Mode Architecture

1. Ingestion Layer:

CSV batch drops, web intent signals (RB2B), and NLP search prompts.

2. Data Enrichment:

Plugs into Clay, ZoomInfo, Apollo, or Amplemarket for verified faculty/execs.

3. AI Reasoning Core:

Claude 3.5 Sonnet synthesizes account pain points and writes PAS messaging.

4. CRM Shield & Sequencer:

HubSpot / Salesforce deduplication + automated outbound sequences.

WORKFLOW BLUEPRINT

n8n Workflow Nodes Explained

How each node in the engine operates in production under the hood.

PRODUCTION ENGINE

Prospect Automation Engine — 9-Node Pipeline

Deploy for Your Company →

01

Schedule Trigger / Webhook

01 Intake & Cron

The Starter (Intake & Trigger)

How it works: Executes daily batches (e.g. 2:00 AM) or triggers on-demand via webhook when intent is detected on your website or a new lead spreadsheet is uploaded.

Daily Schedule

Webhook Endpoint

Batch CSV / Intent

02

Code Transformation

02 Data Normalizer

The Data Normalizer

How it works: Cleans messy lead entries, normalizes company domain names, strips malformed characters, and standardizes payload schemas for downstream enrichment.

Domain Sanitization

ISO Timestamps

Schema Mapping

03

CRM Query API

03 Deduplication Query

The CRM Deduplication Shield

How it works: Queries HubSpot and Salesforce by domain. If an account is already an active customer or open deal, it is excluded automatically to protect existing relationships.

HubSpot / Salesforce

Domain Match

Account Protection

04

Enrichment Adapter

04 Data Tool Adapter

The Contact & Persona Finder

How it works: Connects to your data tool (Clay, ZoomInfo, Apollo, Amplemarket) to locate target decision-makers based on ICP role filters and verifies work emails with NeverBounce.

Target Role Filtering

Email Deliverability

LinkedIn Profiles

05

Claude 3.5 Sonnet

05 AI Research & PAS Copy

The AI Researcher & Copywriter

How it works: Scrapes the company website, uncovers specific bottlenecks, forms a pain point hypothesis, and writes a tailored 3-sentence outreach email on behalf of your sales rep.

Problem-Agitate-Solve

Account Specific Context

Email + LinkedIn + Phone

06

Conditional Logic

06 Approval Switch

The Human Safety Switch

How it works: Allows choosing between 100% full-automation mode or routing drafted messages into a private Slack review channel for quick 1-click SDR approval.

Full Auto vs. Review

Zero AI Collision Risk

07

CRM Upsert

07 CRM Contact Creation

The CRM Record Creator

How it works: Creates/updates Contact and Company records in HubSpot/Salesforce, attaching the AI pain point summary and show intel directly to the CRM record.

Auto-Upsert Record

Attaches Research Notes

Sets Lead Status

08

Sequencer API

08 Sequence Enrollment

The Outreach Dispatcher

How it works: Enrolls the prospect directly into your outbound sequencer (HubSpot Sales, Outreach, Amplemarket, Smartlead) sent from the assigned SDR's mailbox with smart follow-ups.

Multi-Day Cadence

Auto-Stops on Reply

Rep Mailbox Sync

09

Slack Webhook

09 Review Alert

The Slack Alert Queue

How it works: Notifies sales reps in real time whenever a lead requires review or when high-intent prospects reply to book a meeting.

Real-Time Notifications

SDR Channel Visibility

CONCRETE EXAMPLE

The Lead Journey: Step-by-Step

See what happens when a target account enters the Prospect Automation Engine.

1. INTAKE & CONTACT FOUND

Target Account: Enterprise Prospect

Trigger: NLP search targeting VP of Sales in 50–200 employee B2B SaaS.

Contact Resolved: Jordan Reed — *VP of Sales*

Verified Email:
jordan@techscale.io

2. RESEARCH & PAIN POINT

Account Bottleneck Identified

Signal: TechScale just hired 4 new SDRs but lacks outbound automation.

Pain Point Summary:
Reps spending 20+ hours weekly manually researching accounts on LinkedIn, leading to low pipeline output.

3. GENERATED MESSAGE (SENT FOR REP)

3-Sentence PAS Email

Subject: Quick question on SDR outbound capacity at TechScale

"Hi Jordan,

Saw TechScale is scaling the sales team following your recent hiring announcements.

Most VPs of Sales we work with find their new SDRs lose 20+ hours a week on manual account research rather than having qualified conversations.

Enriched via Data Tool

THE SALESGENCY ADVANTAGE

Why High-Growth Teams Choose SalesGency

We don't sell bloated software subscriptions. We build and deploy custom revenue engines for your team.

Live in 30 Days

We don't do 6-month consulting roadmaps. We audit your funnel, design the architecture, and deploy functioning AI engines in weeks.

You Own the Architecture

Built directly on top of your CRM (HubSpot/Salesforce) and data tools. No vendor lock-in; you own the workflows and data

Built for Your Frontline Reps

Emails send directly from your reps' inboxes with high deliverability. Reps only step in to handle warm replies and run demos.

pipelines.
