

EXECUTIVE BRIEF

Prospect Automation Reporting Agent

ELT review writeup for a daily cross-platform reporting system covering Atlas HXM's full prospecting pipeline.

Owner Patrick Diamitani, GTM AI & Automation Manager	Status Ready to begin Phase 1 build
Report skill status Built and tested (`atlas-gtm-insider` skill)	Next review TBD with ELT

Purpose

Provide GTM leadership with a single daily view of prospecting activity, funnel health, and output quality across Factors.ai, HubSpot, n8n, Clay, Amplemarket, and Orum — without manual reporting.

Overview

The Prospect Automation Reporting Agent is an orchestrated AI system that monitors and reports on Atlas HXM's full daily prospecting pipeline — from intent signal capture through email and call outreach. Each morning it delivers one polished executive summary to leadership through Microsoft Teams and BCC email.

Current-state problem

- GTM activity data is fragmented across Factors.ai, HubSpot, n8n, Clay, Amplemarket, and Orum.
- There is no centralized daily view of how many companies entered the pipeline, how many were qualified, how many became contacts, and how many are in active outreach.
- Workflow failures such as API rate limits, enrichment errors, and filter issues are often discovered only after a rep notices a problem.
- Leadership lacks a daily pulse on pipeline generation velocity, rep assignment load, and sequence coverage.

Business impact

- Delayed response to broken automations or underperforming segments.
- Limited visibility into rep workload balance and funnel leakage by stage.
- Manual reporting requires cross-referencing multiple tools, tabs, and APIs.

End-to-end automation pipeline

The reporting agent monitors the complete workflow below, with stage-level volume, quality, and error tracking at each handoff.

Full Prospect Automation Pipeline

Daily monitoring coverage from intent signal intake to outbound email and call execution

Stage	What happens	Tracked outputs
Factors.ai + ZoomInfo	Intent-signal companies are pushed into HubSpot.	Intent companies identified, signal types, page-visit data
HubSpot	Companies land with firmographic and routing fields populated.	Companies received via Factors / ZoomInfo workflows
n8n daily workflow	Prior-day companies are pulled, filtered, round-robin assigned, and forwarded to Clay.	Execution status, filter counts by reason, rep assignment distribution
Clay companies + contacts	Searches for HR Director+ contacts, enriches contact data, generates AI pain point and Email 1 / 2 / 3, then syncs to HubSpot.	Search yield, enrichment rate, email generation success, HubSpot sync status
Amplemarket	Eligible contacts are enrolled in the outbound sequence.	New enrollments vs. skipped, open rate, reply rate, positive replies, meetings booked
Orum	Call tasks are queued for the assigned reps.	Call tasks queued, tasks completed, contact rate

Solution: daily reporting system

Executive Writeup · ELT Review

The agent runs on a daily schedule aligned with the n8n trigger window and coordinates three subagents.

Subagent	Primary job	Key inputs	Output
Data Collection Agent	Connects to each platform API and pulls prior-day activity.	Factors.ai, HubSpot, n8n, Clay, Amplemarket, Orum	Structured daily data object
Analysis & Breakdown Agent	Calculates funnel conversion, compares to rolling averages, and flags anomalies.	Raw daily activity data	Scored metrics dashboard and anomaly list
Report & Dashboard Agent	Builds the GTM Insider report, refreshes dashboard, posts to Teams, and sends BCC email.	Analyzed metrics and alerts	HTML report, dashboard refresh, Teams notification

Analysis logic monitored daily

- Conversion rates at each stage: companies enrolled → qualified → contacts found → contacts enriched → sequence enrolled → replies.
- Anomalies such as high filter rates, low enrichment percentages, sequence stalls, workflow errors, and data-quality failures.
- Performance segmented by rep assignment, intent source (Factors vs. ZoomInfo), and company segment.
- Comparisons to 7-day and 30-day rolling averages to separate clean runs from issue days.

Daily deliverables

1. GTM Insider report (email + Teams)

A polished newsletter-style executive summary distributed each morning with narrative context, by-the-numbers metrics, funnel breakdown, highlights, workflow health, and next-step experiments.

Sample report structure

- Intro narrative summarizing yesterday's run
- By the Numbers: companies enrolled, contacts found, contacts enriched, open rate
- Funnel Breakdown: source intake → filters → Clay companies → Clay contacts → Amplemarket → Orum
- Performance Highlights: enrichment quality, prior-cohort response metrics, rep balance, workflow runtime
- Workflow Status: clean run or flagged errors
- What's Next: prompt tests, sequence changes, and cohort review actions

2. Live dashboard

A continuously updated view of cumulative funnel metrics, 7-day / 30-day trends, sequence performance by cohort, filter-rate breakdown, and rep assignment history.

Platform integrations required

Platform	Integration type	Status
Factors.ai	REST API	To build
HubSpot	REST API (MCP available)	Available
n8n	REST API (execution logs)	To build
Clay	REST API	To build
Amplemarket	REST API	To build
Orum	REST API	To build

Technical architecture

The reporting agent uses one orchestrator, three subagents, and multiple source connectors to create an automated executive reporting loop.

Technical Architecture

Daily orchestration, ingestion, analysis, and executive distribution workflow

Rollout plan

Phase	Timing	Objective	Deliverable
Phase 1 · Foundation	Week 1	Build and connect APIs for Factors.ai, n8n, Clay, Amplemarket, and HubSpot extensions as MCP servers.	All five platform APIs queryable by Claude
Phase 2 · Agent Build	Week 2	Build the three subagents and orchestrator; use the already-built `atlas-gtm-insider` skill for report generation.	Functional agent running on test data
Phase 3 · Dashboard	Week 2–3	Build the live prospect automation dashboard with metric cards, trend charts, funnel view, and rep/filter breakdowns.	Live dashboard accessible to ELT and RevOps
Phase 4 · ELT Rollout	Week 3	Connect Teams distribution, BCC list, schedule the daily 8:00am run, and train ELT on interpretation.	Production agent live with daily auto-distributed reports

Success metrics

KPI	Current	Target
Time to daily insight	Manual, ~1 hour	Automated, 0 min
Platform visibility	0 (no unified view)	All 6 platforms
Workflow failure detection	Same day (if noticed)	Real-time alert
Report adoption	N/A	ELT opens report daily

Resource requirements

Build Patrick (GTM AI) + 1 engineer for API integrations	Timeline 3 weeks to production
Infrastructure Serverless APIs, lightweight database for metric storage, daily scheduler	Cost Minimal — all data sourced from existing platform licenses

ELT decisions needed

1. Timing — current plan is 8:00am daily report delivery.
 2. BCC list — confirm who should receive the GTM Insider email.
 3. Teams channel — decide whether daily posts should go to #gtm-leadership, #sales-ops, or a dedicated channel.
 4. Dashboard access — define who beyond ELT should have live-dashboard access.
 5. Alert threshold — define what failure level should trigger an immediate notification versus the next morning's report (for example: complete n8n failure or enrichment rate below 70%).
